MODFRAME

German manufactured and designed Modular Framing System — *No Welding Required!*

ABOUT MODFRAME

FDG's ModFrame is ideally suited to supporting, heavy pipework, HVAC Equipment, large ducts and cable ladders. This high quality, German manufactured system has been extensively used on projects throughout New Zealand and the world. Fixed together using a system of unique modular components and fastened together with a patented T-bolt, ModFrame is an easy yet effective alternative to welded systems. ModFrame is bringing flexibility and efficiency to the construction industry and is becoming the new norm as a replacement for traditional costly welded frames.

KEY ADVANTAGES

- Eliminates the need for welding, drilling and galvanizing.
- Gain up to 60% time savings and significantly reduced material weights.
- A standard range of system components are stocked and readily available.
- All components are Hot Dipped Galvanized.
- Its modular nature means site modifications are easily completed.
- Frames, supports and modules can be designed by the FDG Team to be fully compliant with NZS 1170.5.

ENGINEERING & DESIGN

FDG offers an engineering and design service for any frames or heavy-duty supports you require throughout your project. We will work together to co-ordinate your design and help you complete your project on-time and on budget.

A full engineering report will be supplied along with a package of layout drawings and a comprehensive bill-of-materials. Engineering data and CAD files are available upon request from the FDG Team, who can assist your internal teams with design in the early stages.
